Detailed Action

1. This application has been reviewed. Original claims 1-11 are pending. The rejection cited stated below.

Specification

2. The abstract of the disclosure is objected to because the abstract should not contain more than 150 words. Correction is required. See MPEP § 608.01(b).

Claim Rejections - 35 USC § 102

3. The following is a quotation of the 35 U.S.C. 102 that form the basis for the rejections under this section made in this action:

A person shall be entitled to a patent unless--

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371© of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) do not apply to the examination of this application as the application being examined was not (1) filed on or after November 29, 2000, or (2) voluntarily published under 35 U.S.C. 122(b). Therefore, this application is examined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

maintaining a routine capable of wait state or idle of being re-entered (see col. 19, lines 40-60).

In considering claims 3 and 9. Generating set of entry points in response of or more

programming macros is inherent to the system of Guedalia et al.,.

In considering claims 4-6 and 10-11, Guedalia et al., disclose maintaining high concurrence

among threads without maintaining a substantial amount of state information of the simulated threads (see col. 10, line 59 to col. 11, line 40 and col. 19, line 50 to col. 20, line 41).
